

• AEROPRODUCTS REGULATOR OVERHAUL •

Marsh Brothers Aviation clean, inspect, overhaul & test warplane propeller regulators.

Built to Last

The propeller and regulators that were fitted in so many high performance warbirds and transport aircraft during WW2 and up until the mid 60's, were well engineered. However, the original regulator seals are now over 50 years old and are prone to leaking when the engine is not running.

To rectify this problem, Marsh Brothers Aviation has developed materials and expertise to rebuild these regulators. The result is a propeller governor that should last for another 50 years.

Quality Products & Service

Marsh Brothers Aviation is a sister company of Thomson-Gordon Group, a 100 year old Canadian

manufacturer of seals, bearings and engineered mechanical components for diverse global markets. This connection provides access to superior engineering, manufacturing and state-of-art R&D facilities that encourage innovation and the delivery of high performance products and quality service.

Fast Turn-Around

Marsh Brothers Aviation will overhaul your propeller regulator or provide one from our stock. All internal components that require renewal will be replaced and the unit leak-tested. Typical turn-around time is 1-2 weeks.

We love warbirds and want to do our part to "keep 'em flying".
